

Information relating to scientific research

1- The BruxApp Research Cloud App is an application for smartphones and tablets structured and aimed at the mere collection of data relating to bruxism conditions. The application records the conditions of bruxism during wakefulness by answering some questions that the app asks the user at various times of the day. The use of the application does not involve any risk to the user's health as it does not use wearable accessories and does not collect biometric data.

The BruxApp Research Cloud app does not carry out any type of further diagnostic or scientific treatment, but only proceeds with the anonymization of the collected data. Following this process, the App makes the anonymised data available to third parties who request it (research organisations/companies, universities...). Therefore WMA S.r.l. and the App do not in any way manage the specific research methods and purposes in the use of anonymised data, which will instead be the exclusive competence of the research institutes.

2- The aforementioned scientific research is aimed at the study and evaluation of the conditions of bruxism during wakefulness through the answer to some specific questions that the app proposes to the subject, concerning a specific oral condition (teeth in contact, teeth clenched, muscles in tension etc).

The expected benefits for users through the direct use of the app are represented by the possibility of discovering and learning about bruxism, through the acquisition of awareness regarding the conditions under investigation. While, thanks to scientific research, benefits can be obtained for all subjects with problems related to bruxism.

The expected duration is 10 years.

Given that BruxApp Research Cloud is an app for smartphones and tablets and the data processed during the research, as already specified above, are previously anonymised in compliance with the provisions of the GDPR and the relevant Italian legislation, there is no risk either for the health of the user, nor related to the confidentiality of his personal data.

3. When registering and logging in to the App, the user will be able to consult this document, the "Terms and Conditions" and the privacy information and freely choose whether or not to give his consent to the use of his data for purposes of scientific research. There is no other way, through the app or outside of it, to provide the aforementioned consent.

4. The User, at any time and without notice, may stop using the App.

The User can uninstall and/or remove the App from his/her device(s). Uninstalling and/or removing the App from the device does not cancel the User's Account.

To proceed with the cancellation of your Account, the User must access your web account with your credentials and click on the appropriate icon (trash can) located at the top right of the screen. The deletion of the Account involves the permanent removal of personal data relating to the User from the system.

5. For any request for further information or assistance, the user can write to:
“contact@bruxapp.info”.

For any request for information or to exercise their rights relating to the processing of personal data, the user can write to: info@wmatechnology.com

6. Please note that the App can only and exclusively be used by adults.
